The **Green Building & City Solutions Awards** is an international contest organized by the**Construction21** network. Every year, it rewards buildings, solutions, and best eco-districts involved in the fight against climate change with their practical solutions implemented.

From 10 May to 26 June 2016, project managers, architects, engineers, industrialists, developers and building contractors are invited to submit their exemplary buildings and urban projects case studies online to have them running in the contest. Projects located anywhere in the world can be submitted via the different Construction21 portals or directly on Construction21 International.

All competing buildings will be visible in 2016 and long after on all Construction21 platforms, in each local language.

The Green Building & City Solutions Awards 2016 will reward the winners during the Marrakesh's COP22 in November 2016.

More information on the contest is available here.
