

My Republic Plaza (Green Office Park 6)

by [Yeni Agvira Hermiza](#) / ⌚ 2017-05-31 04:18:47 / International /
🌐 11224 / 🇪🇸 EN

Building Type : Office building < 28m

Construction Year : 2014

Delivery year : 2015

Address 1 - street : Jl. Grand Boulevard, BSD Green Office Park, BSD City 15345
TANGERANG, Indonesia

Climate zone : [Af] Tropical Wet. No dry season.

Net Floor Area : 15 832 m²

Construction/refurbishment cost : 14 673 193 €

Number of Work station : 5 Work station

Cost/m2 : 926.81 €/m²

Certifications :

General information

My Republic Plaza (Green Office Park6) is located in foot print area amounted 12,890 m2 has five floors for work space and basement. It also becomes one of part in Green Office Park BSD City which built base on Green Building Concept as one of Sinar Mas Land efforts to brings the environmental protection commitment into reality. It has proven as Green Building with honor "Gold" by GBC Indonesia (Green Building Council Indonesia)

Stakeholders

Stakeholders

Function : Construction company

PT. Total Bangun Persada Tbk

<http://www.totalbp.com/index/en>

Contracting method

Other methods

If you had to do it again?

all system are going well as planed. further more it increases efficiency in operational building cost.

Building users opinion

building more healthy and comfort, increase productivity for occupant

Energy

Energy consumption

Primary energy need : 140,00 kWhpe/m².year

Primary energy need for standard building : 250,00 kWhpe/m².year

Calculation method :

Envelope performance

More information :

Wall of façade GOP 6 has an area about 5.624 m². It had been designed and made from some layers of material for solid layer such as concrete, light brick ACP (aluminum composite panel) and gypsum for inside layers The glass uses 8mm T-Sunlux T-CS 140 #2 + 12mm AS + 6mm Panasap Dark Blue (Bluish Grey). Panasap Dark Blue (Bluish Grey). The Panasap glass can absorb radiation of sun which enters the building about 55% (U-Value Total Solid is 1.89 Watt/m².K). and (U-Value Total Solid and include glazing/transparant is 2.96 Watt/m².K) (OTTV) is about 28.9 W/m² and Roof (RTTV) is about 29.7 W/ m². The value is better than National Standard by SNI 03-6389-2000 it is 35 W/m²

Building Compactness Coefficient : 2,40

Real final energy consumption

Final Energy : 117,00 kWhfe/m².year

Real final energy consumption/m² : 117,00 kWhfe/m².year

Renewables & systems

Systems

Heating system :

- No heating system

Hot water system :

- Other hot water system

Cooling system :

- Fan coil
- VAV Syst. (Variable Air Volume system)

Ventilation system :

- Natural ventilation

Renewable systems :

- Solar photovoltaic

Other information on HVAC :

using central water cooled system

Smart Building

BMS :

Monitoring AC, energy consumption, CO2 Sensor, water and others

Smartgrid :

NA

Users' opinion on the Smart Building functions : can monitor energy consumption building up to date

Environment

Urban environment

This building in Green office park area, that have many public facility : supermarket, lake, garden, restaurant and pedestrian to approach people walking to public facility

Land plot area : 13 000,00 m²

Built-up area : 60,00 %

Green space : 7 064,00

Products

Product

ACP (aluminum composite panel)

so much choice for glass

Costs

Construction and exploitation costs

Total cost of the building : 14 673 193 €

Energy bill

Forecasted energy bill/year : 16 900,00 €

Real energy cost/m² : 1.07

Real energy cost/Work station : 3380

Health and comfort

Life Cycle Analysis

Material impact on GHG emissions :

62

Eco-design material : 5%

Water management

Consumption from water network : 7 800,00 m³

Consumption of grey water : 2 335,00 m³

Consumption of harvested rainwater : 313,00 m³

Water Self Sufficiency Index : 0.25

Water Consumption/m² : 0.49

Water Consumption/Work station : 1560

Use of non-potable water for cooling tower and other purposes it use recycles water and storm. The total of water needs is 62 m³ which supplied by 62% recycle water and 38% clean water.

Rainwater harvesting & percentage in reduction of potable water consumption: the water needs which can supply by the storm are 47m³. It is based on assumption that rainfall is 50 mm/day with the percentage of storm 53% in a year.

Water treatment / recycling capacity

The water needs which can supply by recycling water is 25.6 m³. It used to supply WC flushing, irrigation, and makeup

Flush garden sprinkler system

Other Specifications

water cooling tower.

The total of water need is (urinal, WC, faucet, shower, irrigation, and make up the cooling tower) 65781 L/day. The water source of recycling water and storm can supply 14939 m³ and

it is replaced

Indoor Air quality

8707 L/s

Comfort

Health & comfort : Area of natural lighting in buildings GOP 6 include: Toilet Area, Working Space Area, and the Lobby Area. Zoning for Integrated lighting and Day Lighting For Working Space Area Natural lighting percentage was 34%

Calculated indoor CO2 concentration :

Calculation ASHRAE : 8.707 L/s = 18.450 CFM Design 15.500 x 2 wing = 31.000 cfm (cubic feet minute) Fresh air needs is 15,832 CFM. It calculate based on air need per person set by ASHRAE62.1-2007, it is 5.5 l/person or 11 CFM/Person but it already provided

Measured indoor CO2 concentration :

2.Number of Ventilation air per person (CFM/person) Fresh air needs measurement show the result is 15.832 CFM. It was calculated based on air needs per person based on ASHRAE62.1-2007, it is 5.5 l/person or 11 CFM/person. But the building completed with

Calculated thermal comfort : The room temperature has been measured and the result show between 24-250C with humidity between 60.8%-66.8%. It is included into a comfort zone that measured by the psychometric chart

Measured thermal comfort : Thermal comfort – design indoor temp and relative humidityThe room temperature has been measured and the result show between 24-250C with humidity between 60.8%-66.8%. It is included into a comfort zone that measured by the psychometric chart

Carbon

GHG emissions

GHG in use : 103,00 KgCO₂/m²/year

Methodology used :

IPCC

Building lifetime : 25,00 year(s)
