Economical building

Building

Energy-intensive building

Building Type : Collective housing < 50m

Construction Year : 2012

Delivery year : 2012

Address 1 - street : 20123 MILANO, Italia

Climate zone : [Cfb] Marine Mild Winter, warm summer, no dry season.

Net Floor Area : 3 000 m² Other

Construction/refurbishment cost : 4 000 000 €

Number of Dwelling : 12 Dwelling

Cost/m² : 1333.33 €/m²

Proposed by :

General information

The intervention involves the complete renovation of a 1901 building in the historic center of Milan. The building that has a "L" shape and overlooks an inner courtyard, spreads over five floors and houses flats, laboratories and new shops on the ground floor. On the outside as well as for the restoration of the existing façades, a new prospect faces the neighboring garden. At the center of this front is created a full-height recess that accommodates the loggia and creates the feeling of being faced with two distinct factory buildings: a brick tower with views of the park's openings and a classic facade that goes on camouflaging the street front. The formal result obtained allows the building to integrate harmoniously with architectural preexistence. The loggias, which are born in the new cavity, are characterized by a steel parapet arranged for the placement of plants and flowers; On the top floor instead a terrace is created that highlights the gap between the two volumes. The intervention on the inner court is aimed at ensuring visual continuity between the road and the inner park thanks to the large glazed openings that bring air and natural light even in the underground spaces of the building. In the building a new enclosure insulation and modern plant solutions such as a water heat pump and radiant floors have been set up to provide maximum thermal comfort for users with minimal energy consumption.

Energy

Renewables & systems

Systems

Heating system :

- Geothermal heat pump
- Low temperature floor heating

Hot water system :

- Condensing gas boiler
- Heat pump

Cooling system :

- Geothermal heat pump

Ventilation system :

- humidity sensitive Air Handling Unit (hygro A

Renewable systems :

- Heat pump (geothermal)

Costs

Construction and exploitation costs

Cost of studies : 4 000 000 €

Land plot area

Land plot area : 630,00 m²
