Green Solutions Awards 2018: Deadline extension

Green Solutions Awards 2018: Deadline extension to 17 June 2018

New deadline: Applications to the Green Solutions Awards 2018 close on June 17

Construction21, the organiser of the international competition Green Solutions Awards, grants one extra week for professionals to enter. Applications close on Sunday, June 17th, at midnight, to publish their buildings, districts or infrastructures in the category of their choice.

Finish before June 17

With this extension, pioneers of sustainability who want to compete in the Green Solutions Awards have three weeks left to publish their case studies in order to enter the 2018 edition. This unique competition offers the opportunity for greater visibility nationally and internationally and also to get noticed by thousands of professionals. In 2017, the Awards generated 1.5 million views!

A chance to take

Participating in the Green Solutions Awards guarantees visibility across the globe. An intense communication plan, on and offline, relayed by more than 80 media partners, along with related events, will offer wide-scale dissemination of the candidates' solutions and know-how. Last but not least, applying is free!

Naturally, every candidate contributes to accelerating the transition of the construction sector toward sustainable practices by sharing its solutions and inspiring its peers.

Former candidates can testify, the competition has multiple benefits. Don't wait any longer and join the 2018 race! [Read the former candidates testimonies.](#)

How to participate?

Entering the Green Solutions Awards is quite easy: one connected on Construction21 (creating your account is quick and free), simply publish a case study on one of the three databases – [Buildings](#), [Districts](#), [Infrastructures](#) – to describe one of your exemplary projects (or more). If your project is located in a country with a Construction21 platform, use the matching platform. Otherwise, publish your case study in French or in English in the international platform. **All case studies are then translated and they are visible in English, French, Chinese, Spanish...**

Select the categories (see below) best matching the strong points of your project. In addition to their chosen categories, all candidates will be eligible to the User's Choice Award and to the **Grand Prizes** (by jury's decision).

Detail a minimum of one solution per building, district or infrastructure, that matches the choice of your category.

The Construction21 team walks you through the process. The team also takes care of the promotion of your realisation on the website and on social media ([Twitter](#), [Facebook](#), [Pinterest](#))!

About Construction21.org

As the social media for sustainable buildings and cities, [Construction21](#) disseminates free information and best practices for sustainable development among actors of the building and city sectors, especially through its three databases dedicated to exemplary [buildings](#), [districts](#) and [infrastructures](#).

The Construction21 network counts 11 national platforms in Europe, China and North Africa, managed by local non – profit organisations, along with a 12th international platform in English. In 2017, the network generated 700,000 visits and 7 million views.

Every year, Construction21 organises the [Green Solutions Awards](#), an international contest aiming to promote pioneers' best practices and inspire professionals around the world. The 2017 awards generated 1.5 million views. In 2018, the international winners' ceremony will take place in December during COP24, in Katowice, Poland.
