Owner approach of sustainability

The Green APPROACH Built respecting the environment and future generations, the EdenGreen building meets the eco-construction and eco-management standards. Control of flow and consumption (water, energy, waste), choice of products, systems and processes with low environmental impact construction, the building has been optimized for the comfort and health of occupants without damaging the nature. The EdenGreen project is an environmentally friendly building that integrates eco-construction, eco-management, and comfort and health of occupants. Low energy thermal insulation, double flow ventilation with energy recovery are some elements that have allowed the project to get BB energy certificates.

Architectural description

The Eden Green proposes a sustainable, sober and contemporary architecture, offering "premium" services in the greatest respect for the environment.

Energy

Energy consumption

Primary energy need : 71,50 kWh/m².an

Primary energy need for standard building : 75,00 kWh/m².an

Calculation method : RGD du 30 novembre 2007 - bâtiment d'habitation

Final Energy : 97,50 kWh/m².an

Breakdown for energy consumption :

26 kWh / m² / heating needs

71.5 primary energy requirements

Envelope performance

Envelope U-Value : 0,39 W.m⁻².K⁻¹

Real final energy consumption

Real final energy consumption/m² : 57,70 kWh/m².an

Renewables & systems

Systems

Heating system :

- Condensing gas boiler

Hot water system :

- Condensing gas boiler

Cooling system :

- No cooling system

Ventilation system :

- Double flow heat exchanger

Renewable systems :

- Solar Thermal

Environment

GHG emissions

GHG in use : 15,90 KgCO₂/m²/an

environmental performance class

Products

Product

Aluminium sliding "Comfort 160"

SAPA Luxembourg

Stéphane Hardy

<http://www.spapgroup.lu>

Product category : Second œuvre / Menuiseries extérieures

The aluminum sliding "comfort" 160 are really easy to use by everybody. Given the challenge (terraces have to be accessible for wheelchairs), the rail has been fully integrated into the ground and the outer and inner levels are perfectly aligned. These adaptations have had no bad consequences on the excellent thermal performances in terms of U_w insulation and airtightness of these sliding openings.

No difference of floor level between indoor and outdoor - Design For All

Costs

Urban environment

The residential and commercial building is located in an area of Bettembourg, close to the city center. This living facility, close to all commodities (shops and transport), easy to access (near the train station), is near a magnificent public park built by the municipality.

Building Environmental Quality

Building Environmental Quality

- energy efficiency
- integration in the land
